

# *Tier 7 Network Proposition*

What It Is, How It Works & How It Comes Together

*mm*

---

Perhaps the most secretly annoying thing in any industry is not having a squad to call on in bad times & one to exploit the gold rush during the good times.

### **In school, we called this being popular.**

You were sure to be invited to every party by *someone*. And if anyone attacked you? You could **call on *someone***.

Normal kids would scoff like they do not care, but in their hearts they knew the sting. They understood that if they had a squad. Life would be easier. Richer. And the ironic thing about this is?

### **Life never stops being a school.**

It just goes from one & transforms into another. This is because we will always be social creatures that are always in perpetual competition. *For clout. For money. For respect.* And social creatures in competition? Are *always* stronger together.

### **The Crypto world is included in this idea.**

In the Crypto world what's the issue that holds most people back? They get stuck in dusty telegram groups - unable to get inside of secret places where they may (once or twice) on social media see an 'alpha screenshot' link of x amount made by x people.

### **If your IQ deserves a place to be **respected & harnessed?** Welcome.**

*The project I am building aims to educate the wandering & give the wealthy a place to connect. Providing them an important resource they can add to their collection, whilst leveraging the power of a network, to solve problems, find new opportunities & most get through any door they desire.*

*Shadow*

Imagine you swipe open your phone and are able to access a network full of investors & traders, all *trained to a competent standard*.

## The network effect of a 1000 clones:

- ① *Hunting for huge undiscovered opportunities*
- ② *Receiving world class training*
- ③ *Sharing investment access & connections*
- ④ *Respected as thought leaders under one name*
- ⑤ *Training together to extract \$ from the market*
- ⑥ *Boosting each-other in public social media spheres*
- ⑦ *Forging unique & meaningful connections*
- ⑧ *Being challenged regularly on high conviction ideas*
- ⑨ *And matching your high IQ with others of high IQ*
- ⑩ *Leveraging the community name to open doors*

---

One that you don't continually pay for and that rewards you for staying inside.

For the majority of investors & traders is a *dream come true*.

And this is exactly what I'm building.

In the last six years - I have done very well, but if I had a place like this where my time, money and effort would be leveraged? I would literally be at 50x the networth I am today.

It's not debatable. Steel sharpens steel. Efficiency triumphs hard work. Others that understood this have outperformed us all.

**Let's now look at how the network is brought together.**

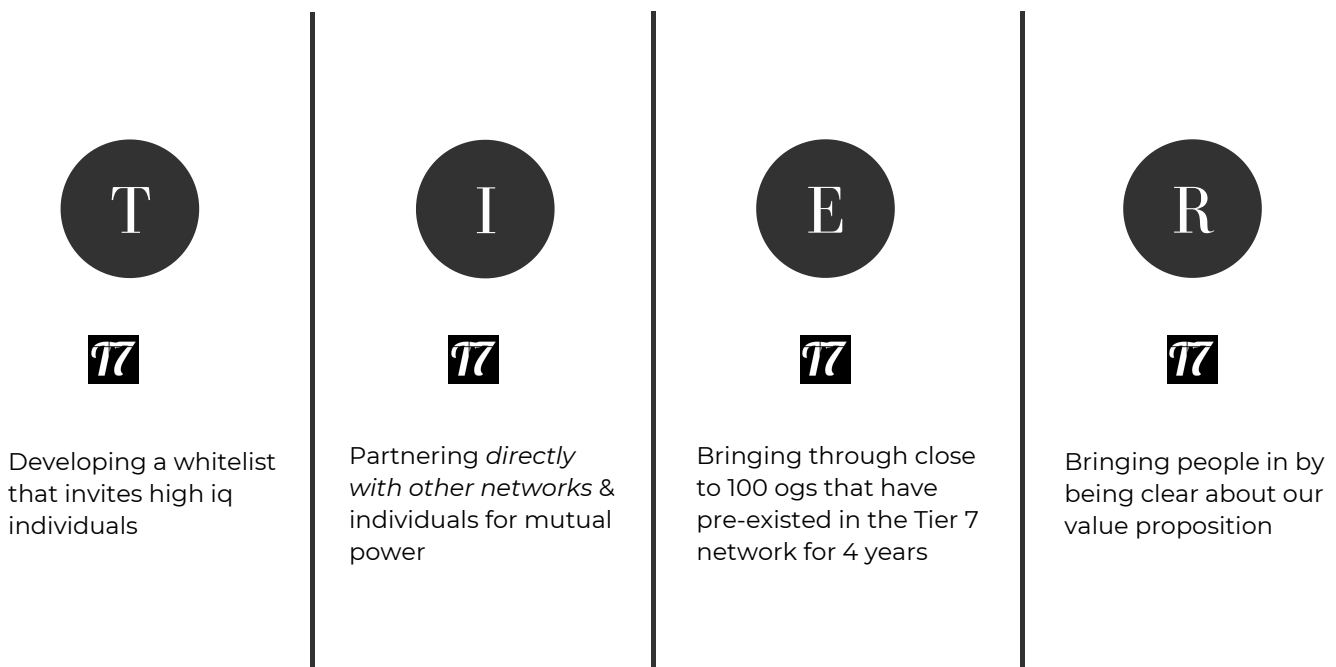

---

## Step One

### Secure The Network: “Operation Giga Brain”

*The first step in this process is to develop a core network that will be the base of everything that is to come.*

**In order to achieve this we have used five lanes:**

**The NFT are used in a very clever fashion - to make sure we could secure such a network.**

- The art was made to be a status symbol.
- The price puts off weird NFT speculative investors.
- And the risk mechanism rewards all early adopters for their loyalty.

***This is the first step is completed & will evolve as time goes on - read on ✓***

## Step Two

### How The Network Will Be Leveraged

In the Tier 7 server, members will be guided to interact with each-other, incentivized to contribute, educated & represented by us (under the name of the Tier 7 network)

### Network Leverage Comes In Five Simple Forms:

1

#### Information Reach:

The top ideas found by the 1000 man squad will be filtered, re-composed and featured as official posts. A *hunting criteria* will be given straight from the Tier 7 process to every member.

2

#### Opportunity Leverage:

We will use the name of the network to get through investment doors, since the combined force of the network will have a very large amount of combined capital & knowledge. Which will benefit other companies.

3

#### Clout & Attention:

The combined force of our network partners & having a 1000 man squad will mean people in the social spheres will eventually be forced to pay attention to what we think.

4

#### Hosting regular spaces led by the Tier 7 team:

The Tier 7 team will prepare a consistent hunting ground for all - members where new narratives / opportunities are brought to them & explored

5

#### Tier 7 will strike deals on behalf of the network with other companies

This could be anything from better profit kick back rates with hedge funds, discount to services, better exchange fee's - etc

From here, let's look at how the network is organised ✓

## Step Three

### How Members Will Post & How Content Will Work

All the above speaks for itself. *However let us quickly talk about making sure the content is organised.* In our servers, there will be two main contribution categories. The network will be a filtration process with the best ideas from one category ending up in the top ideas category. The Tier 7 team post their own content here but also filter the top opportunities found by others and represent them there.

---

#### Category One: Opportunities

This is where all the best ideas in the server end and float to the top

1. Ideas found directly by the team and its networks will be posted here
  2. Ideas from category 2 will be repackaged by the team and posted here
  3. Ideas from category 2 that have over 100 reacts will be auto posted here
- 

#### Category Two: Ranked Submissions

This is where all the ranked members will post their contributions

1. White-list members that come with experience will have posting rights here
  2. Anyone that is highly competent will also be able to post
  3. Or anyone that has received a rank from in network recognition
- 

#### Other

1. A guide on spotting the most asymmetric opportunities will be provided
2. All opportunities will be higher time-frame opportunities
3. Material will be investments, spot opportunities, key observations

# How Will Users Be Incentivized To Take Part?

First, there is no forceful obligation for a member to contribute.

That is not our approach. The network is a resource. We will have enough material to support the network. Instead we have faith that we will deliver so much value - members will feel inspired of their own accord.

## Furthermore the real question is: Why does anyone work as a team?

They do so because it's enjoyable to do so. Think simply and you will know that people spend years communicating in telegram groups simply because it's their home. It's their community. This will be their new one. A better one.

That said - we do have specific rewards to incentivise people in the network

- 1 The most prestigious members are awarded ranks in our network
- 2 They will be featured socially (we will make sure profiles will be boosted internally & externally by the ENTIRE network, so that they are recognized on social media)
- 3 They will get a slightly higher allocation in investments we find
- 4 They will gain access to a special lounge in order to be more efficient
- 5 The best contributors will get free MM airdrops
- 6 The best contributors will get free 2nd gen passes

## And the most important thing?

Leaving the network may get you back a \$1000+ fee. But you lose your NFT, your status symbol & the opportunity cost of doing so is infinite.

# This one is simple.

First, there is no forceful obligation for a member to contribute.

That is not our approach. The network is a resource. We will have enough material to support the network. Instead we have faith that we will deliver so much value - members will feel inspired of their own accord.

- They bring us cream-of-the-crop opportunities.
- We bring them cream-of-the-crop opportunities.

- The opportunities we talk about are NOT day trades
- We are talking about high liquidity, simplistic opportunities

- This could be a huge early investment
- This could be a life changing spot opportunity in a bull market

- They boost our network
- We boost their network

- They work as an extension of our eyes and ears
- We work as an extension of their eyes and ears

- This acts in the inverse way
- And applies in the inverse way

## The Final Piece: The Minimum Standard & Value

For the few average holders among our ranks. All get access to world class training, to make sure they are trained to a standard.

## Value NFT

As you should then already know by now is that holding your #MM NFT will serve as a pass into this network.

It is an obvious value proposition because if you want to leave, you can sell your NFT to someone else to transfer your membership - rendering much of your access cost free, cheap or even profitable.

The access of what the NFT grants is already far beyond the mint price - both for those who need a boost and those that are already wealthy. The course it will give you access to will be listed on the free market for 2.5K a piece the moment the NFT collection is available for trading.

*Alongside this? The art is premium.*

*Alongside this? The network is already successful*

*Alongside this? The network connections are priceless.*

We have developed a bullet proof value proposition *on purpose*
